Top-Rated VLSI Training Institute. Don't just learn VLSI. Get hired for it. Zerlon offers industry-ready VLSI and semiconductor training with strong placement support across Core VLSI companies, semiconductor services firms, and technology startups driving silicon innovation.

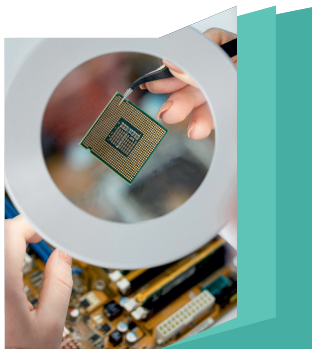

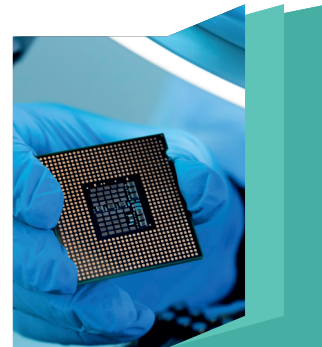

Beyond the Silicon

At Zerlon, we help aspiring engineers and working professionals build strong careers in the semiconductor industry through focused VLSI training. With over nine years of experience, we combine clear fundamentals with practical, hands-on exposure to real-world chip design and verification. Our industry-aligned approach ensures learners gain the skills, confidence, and job readiness required to succeed in today's VLSI and semiconductor domain.

Zerlon is a leading VLSI training institute offering job-oriented semiconductor courses designed to bridge the gap between academic learning and real industry requirements.

Our Mission

Our mission is to bridge the gap between academic learning and industry expectations by delivering practical, hands-on VLSI training that prepares learners for real semiconductor roles.

Our Vision

Our vision is to become a globally recognized center of excellence in VLSI education, empowering learners with the skills, confidence, and industry readiness to contribute to real-world chip design and verification from day one.

Our Core Values

Building strong engineers through honesty, clarity, and consistent learning.

Depth Over Shortcuts

Trust Build Through Transparency

Learning That Feels Real.

Consistency in Guidance

Why Choose Zerlon for VLSI Training?

Zerlon stands apart as a career-focused VLSI training center with a strong emphasis on practical learning and placement outcomes.

9+ Years of VLSI Training Excellence

A proven track record in delivering industry-aligned semiconductor education.

Job-Oriented VLSI Curriculum

Courses designed around current industry requirements and hiring expectations.

Specialized VLSI Domains

Physical Design, Design Verification, Advanced Digital Electronics, and Advanced Analog Electronics.

Hybrid Learning Model

Combination of instructor-led online sessions and intensive offline practical labs.

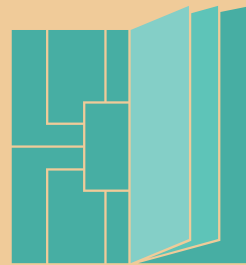

Industry Standard EDA Tools

Hands-on exposure to tools and flows used in real semiconductor companies.

Strong Placement Support

Resume building, mock interviews, and access to hiring opportunities.
